HX8801

TFT-LCD AV CONTROLLER

August 2002, Version 02

1. General Description

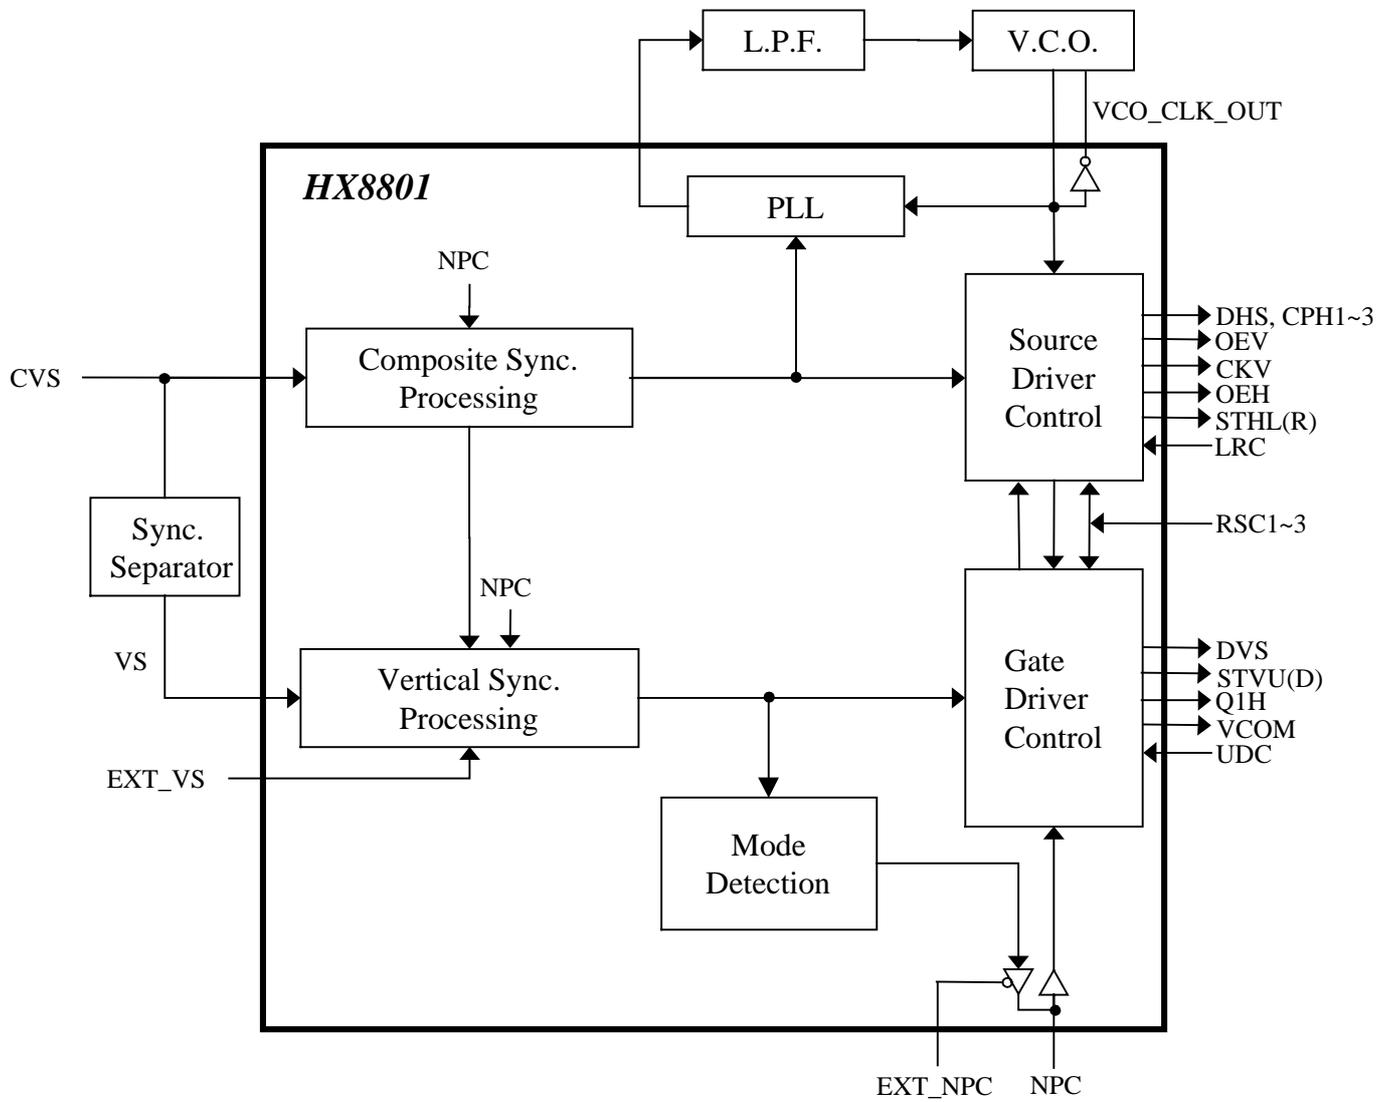

The HX8801 is a timing controller for small panel TFT-LCD. It provides horizontal and vertical control timing to TFT-LCD source and gate drivers. Built-in vertical synchronization detection generates vertical synchronization signal internally without the extra components. Built-in phase lock loop sub-function with external VCO and low pass filter circuits produces system clock which synchronizes input composite synchronization signal.

2. Features

- Support six display resolution mode, up to 1440 × 234.
- Master clock frequency: 30 MHz max.
- Built-in vertical sync. detection to omit the external sync. separator.
- Single supply voltage: +5.0V.
- Shift clock signals for the source driver (3- ϕ Clock).
- Line inversion driving scheme.
- Support NTSC/PAL TV system.
- Provides source and gate drivers control timing.
- Provides flip and mirror scan control.
- 48 pins LQFP.
